

OptiAuthor™ 3.5

Consolidate massive amounts of important information easily, distribute it securely, find it quickly, and stay compliant every step of the way ...

Consider OptiAuthor™ 3.5:

- Indexes data, documents, and images for effective, on-demand search and retrieval.
- Secures documents with encryption or user login.
- Reduces offsite storage space and decreases time to locate documents.
- Helps you address compliance requirements.

OptiAuthor™ 3.5 solves information distribution, archival, and retrieval requirements ... on your computer network, on the Web, or on mobile media (CDs and DVDs).

Product Overview

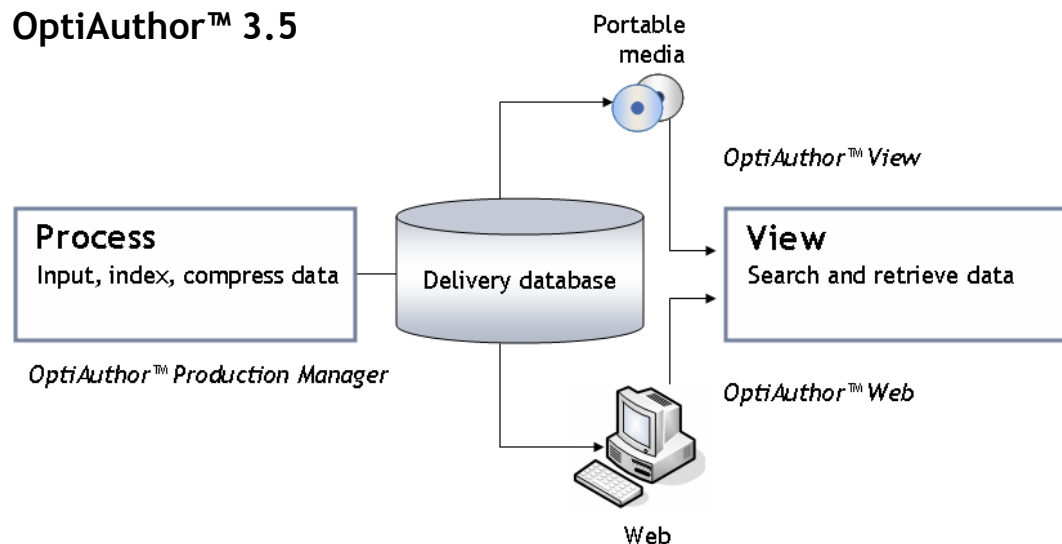

OptiAuthor™ 3.5 indexes and compresses large quantities of data and documents from a variety of sources including medical records, stock transactions, invoices, bills, etc. to produce user-friendly, searchable output. The results, which can be encrypted or password protected, are packaged with an easy-to-use search application (and viewer) for delivery via your network, the Web, or mobile media (CD or DVD).

Jobs are set up, then efficiently run and monitored using OptiAuthor™ Production Monitor. End users can easily search through indexed information online or on mobile media using OptiAuthor™ Web and OptiAuthor™ View.

The viewer is very user friendly. Search capability worked like a charm. Your viewer is easier to use than what we had before.

OptiAuthor™ 3.5

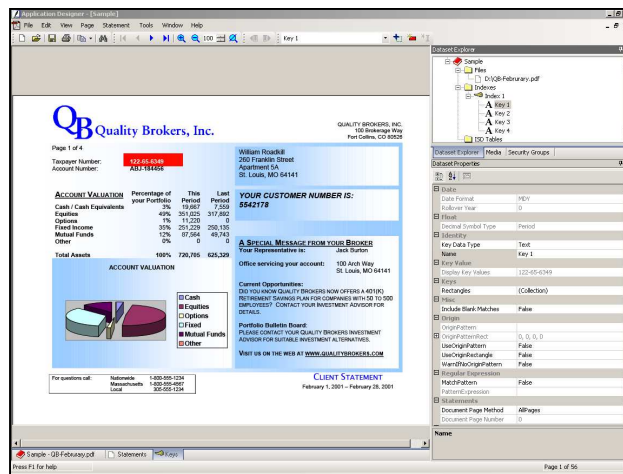

Mountains of paper data become accessible online or on CDs and DVDs, and the information can be easily archived, searched and retrieved by those who need it ... when they need it!

Features and Benefits

Data input and output

- Supports a wide variety of inputs. Input data in these native formats: PDF, 3211 line data, images, and text. Or use specialized transform utilities to handle additional formats like: AFP, LCDS, Metacode, and PostScript.
- Input previously indexed electronic documents with metadata. Input any electronic files with related metadata such as scanned or graphic images (TIFF, JPEG, PNG), film clips, CAD drawings, or electronic documents from a customer's document repository.
- Standard output no matter what the input type. Standardize your output by exporting it to Adobe PDF format.
- Enhanced document security. Use information from standard LDAP or MS Active directory to restrict access to documents on the Web; use AES encryption, PGP public/private key pairs, and user passwords to restrict access on CD/DVD.
- High capacity archiving. OptiAuthor™ integrates with OptiMaster to produce CDs, standard DVDs, and dual-layer DVDs. Dual layer format allows 9.4 GB of data to be written to one DVD!

OptiAuthor™ Designer for defining statement indexes

Job processing

- Centralized job control. Start, monitor, and control remote and local jobs. Conveniently control your jobs from an easy-to-use Production Manager dashboard.
- Automated load balancing. Automatically improve allocation of system resources to ensure the right jobs get done on time.
- Integrated Web presentment and media output. Use one processing job to create searchable documents for either the Web, CD/DVD, or both ... with the same friendly search interface.
- Dynamic CD/DVD creation and labeling. Extract labeling information stored in the data and integrate seamlessly with OPTIMUS OptiMaster and Rimage® CD production system to automate disc creation and accurate labels.

Data search and retrieval

- Search for any information in any document. Find the right information easily, when you need it ... on the Web or on mobile media.
- Download the information you find. Any information you view on screen can be downloaded to your PC for future reference and use.
